Job Posting | Plumbing Designer

Marque Engineering, a 10-person full-service engineering firm, is seeking a **Plumbing Designer**. This position will provide technical design support for plumbing drawing production utilizing CAD/Revit applications. The Plumbing Designer applies standard drafting techniques to generate and interpret drawings in support of assigned projects, ensuring all established company design standards and practices are followed. This Plumbing Designer will be expected to coordinate and work closely with a multi-discipline design team. This position offers the opportunity to work with, learn from and be mentored by engineering staff while executing responsibilities.

Responsibilities:

- Utilize design techniques, tools and principals involved in production of precision technical plans, drawings, details and models.
- Generate plumbing, piping and detail drawings.
- Prepare design drawings and construction documents.
- Prepare documents in conformance with standards and quality control requirements.

Qualifications:

- Associate Degree in Plumbing and Heating (or equivalent years of contracting field experience).
- 2-4 years related technical design in the architecture/engineering field
- Understanding of basic engineering principles as it relates to plumbing design
- Knowledge in creating isometrics, piping, equipment layouts and other drawings
- Experience using REVIT and AutoCAD
- Knowledge of the International Plumbing Code and/or Ohio Plumbing Code.

This is an excellent time to join an established multi-disciplinary Engineering firm with a growing team of design professionals. Excellent salary and benefits. Marque Engineering is an Equal Opportunity Employer. No recruiter calls please.
